

**NABAKEM**<sup>®</sup>  
Chemicals & Aerosol

SP-100C

SPAZERO SP-100C (Antispatter Agent)

**Packaging** • Liquid 18ℓ/PVC

**Unit :**

## Features

---

- Outstanding spatter prevention effect (effective for one month or longer)
- Rust resistant effect to prevent the rusting
- No negative impact on welding
- Durability and coating are outstanding (4~5m<sup>2</sup>/kg)
- No harm for human body

- Little odor and outstanding workability
- Fast drying and outstanding spread out

## **Uses**

---

Metal and non-metal SPATTER attachment preventing agent

## **How to Use**

---

- Remove the degreasing or substance and then spray
- Coat consistently with spray or brush on the welded part before welding.
- It is fine to coat and weld immediately, but it may be more effective to confirm the dryness before welding.
- For the work processing, the spatter is not attached for one month of welding after temporary coating on the welding part.
